

# Activate Pre-Run Scenario for Display

---

This is the approved revision of this page, as well as being the most recent.

The printable version is no longer supported and may have rendering errors. Please update your browser bookmarks and please use the default browser print function instead.

*Activate Pre-Run Scenario for Display* can be found from the Main Menu, and is only available when using the web version of the model. Click **Display** and then hover over **Activate Pre-Run Scenario for Display**.

On the web version, several hundred .sce files have been pre-run and saved as .run files. The Activate feature deals with these previously-run scenario files by calling them up and activating them, thereby making them available for all display options in the model. Simply hover through scenario grouping to get to the desired scenario then click the scenario to load. A confirmation message will appear as the graphic displayed below. Click OK to return to the IFs home screen.

International Futures

**Scenario successfully loaded - Results can be displayed.**

OK

Pre-Run Scenario Window

After this message appears, the scenario forecast results can now be viewed from any of the display options with a scenario drop down. For example in the *Flexible Displays* page the successfully loaded scenario will now be available to select from the *Scenarios* display option field.
