

Annotation

This is the approved revision of this page, as well as being the most recent.

The printable version is no longer supported and may have rendering errors. Please update your browser bookmarks and please use the default browser print function instead.

This feature of IFs allows users to quickly annotate different Run-Result-Files and Scenario-Load-Files to understand exactly what parameters have been altered and how they were altered. When you see an Annotation option, be sure to highlight the Run-Result-File (.run file) or Scenario-Load-File (.sce file) that you would like to more clearly understand and click on annotation. A window will appear after a moment (it takes a bit longer because IFs is going online to retrieve the information you are looking for) that will show you specifically what interventions have been made in the Run-Result-File or Scenario-Load-File that you have chosen.
