## Version 8.57 (December XXth, 2025)

[PREVIOUS VERSION](#) | [INDEX PAGE](#)

You can download IFs Version 8.57 at IFs 8.57.

### Interface Updates

---

- Fix to calculate the starting year value correctly where only forecasted values are available, when the "Use all available history data" is turned on.

### Model Updates

---

- Added new variable to display intersectoral flows in Flex Displays: INTSFLOWS.
- Fixed problem with rebasing to 1995 in function estimateHistory.
- We have changed the adjustments made to the Agriculture (and Energy) Column in the SAM, were previously any change introduced into Gross Production by changing ylm (or enmpm) was being proportionally distributed to All the sectors in the Intersectoral Flows, but now we are NOT passing that change to the Sectors, so all of it goes to VADD, as if it was purely coming from an improvement in technology. This helps solve a problem where we were seeing reductions in Gross Production of other sectors by this intervention alone, caused by reducing the relative weight of other sectors relative to the new total, specifically for Iraq.

### Data Updates
