

Reload Base

The printable version is no longer supported and may have rendering errors. Please update your browser bookmarks and please use the default browser print function instead.

Use the *Reload Base* feature in IFs to reload the base case run to the working file. This may be helpful when working with a large number of run files, as it will reset the base case as the default scenario option and can be accessed from the scenario drop-down at the top of the list. From the *Main Menu*, choose **Scenario Analysis** and click **Reload Base**. A message will appear stating that the base has successfully been reloaded.
