

# Use IFs (Download): Bilateral

The printable version is no longer supported and may have rendering errors. Please update your browser bookmarks and please use the default browser print function instead.

The *Bilateral* Specialized Display can be accessed from the Main Menu; click **Display, Specialized Display, the *Bilateral History and Forecast***. This specialized display is only available in Bilateral versions of the model. Use this display to explore bilateral variables historical data and forecasts for any dyad of countries covered by IFs. For example, explore what percent of China's trade is with Serbia, or explore migration flows between Mexico and Brazil.

The screenshot shows the 'Bilateral Interaction' interface. At the top, there's a 'Continue' button and a 'Series Type' dropdown. Below this is a 'Historical Series' list with a 'Select Current' button. The list includes variables like 'AidReceived', 'AidSent', 'ArmsExportsAtBStock', 'ArmsImportsAtBStock', 'Bandwidth', 'CommonLang%', 'ConflictYears', 'DiploAllianceSharedWeighted\_ATOP', 'DiploAllianceSharedWeighted\_COW', 'DiploEmbassyIn', 'DiploEmbassyOut', 'DiploGOSharedWeighted', 'DiploTreatySharedWeighted', 'DistanceCEPII', 'DyadicAid%GDP', and 'DyadicArms%AllDyadicArms'. Below the list is a 'Selected Series: (multi-select allowed)' section with a 'Remove Selected(s)' button. On the right, there are two columns for 'Actor' and 'Partner' with country lists. Below these is a 'Selected Dyads: (click to remove)' section with a 'Remove All' button. At the bottom, there are buttons for 'Search', 'Clear', 'Computation', 'Gravity', 'Table', and 'Line'. On the far right, there's a 'Geography Options' section with radio buttons for 'Country', 'Groups', 'Decomposed Groups', and 'Geography-Lists'.

An example of the Bilateral specialized display after first being opened.

Explore the bilateral data and relationships of dyads in IFs using the options and features available in this display.

- **Continue:** Go back to the previous menu or to the Main Menu of IFs.
- **Series Type:** Choose between the following series types; the current selection will have checkmark next to it.
  - **Dyadic:** Historical dyadic variables.
  - **Monadic for Actor:** Historical monadic variables for the chosen actor. This is the same set of variables that are available in the non-bilateral version of IFs.
  - **Monadic for Partner:** Historical monadic variables for the chosen partner. This is the same set of variables that are available in the non-bilateral version of IFs.
  - **Saved Formulas:** Formulas created and saved using the **Computation** feature are housed here. The DYADICMILSTOCK formula is loaded by default and is a formula of imports and exports of arms as a stock, representing cumulative arms trade of a dyad.

When a formula is added to the **Selected Series** table three new menu options appear: **Save Formula**, **Rename Formula**, **Edit Formula**, **Edit Gravity**.

- **Forecast**: Forecasted dyadic variables. **Scenario** display option appears once clicked.
- **Forecast with Historical Analog**: Forecasted dyadic variables along with their historical analogs if available. **Scenario** display option appears once clicked.

Other temporary menu bar options:

- **Save Table**: Save the last made table. This option is only available when a table is generated using **Table** and **Continue** is clicked to open the original Bilateral screen.
  - **Save to File**: Download a file of the table in IFs default format.
  - **Save to Clipboard**: Save the table to clipboard on device, to paste elsewhere.
  - **Save to Transpose**: Download a file of the table transposed form IFs default format.
  - **Save in Panel Format**: Download a file of the table in panel format where each row is a unique value.
- **Save Formula**: Save a new Formula created using the **Computation** option from the **Selected Series** table to Saved Formulas.
- **Rename Formula**: Change the name of a formula using the text box that appears when clicked; click **OK** to rename or **X** to cancel.
- **Edit Formula**: Edit a selected formula following the same process as the **Computations** feature from *Self-Managed Displays*.
- **Edit Gravity**: ??

Other display options:

- **Historical Series**: Select a desired variable then click **Select Current**.
- **Actor** and **Partner**: Select the desired countries, groups, decomposed groups, or geography-lists to be actor and partner in a dyad, then click **Add Dyad**.
- **Geography Options**: Choose to display **Countries**, **Groups**, **Decomposed Groups**, or **Geography Lists**.
- **Select Series**: This box lists the current series or variables selected to explore. To remove one series click it in the box so it is highlighted then click **Remove Selected(s)**.
- **Select Dyads**: This box lists the current dyads selected to explore. To remove one dyad click it in the box, or click **Remove All** to clear the box.
- **Search**: Click to open search page to look for certain variables or variable lists.
- **Clear**: Clears the **Select Series** box.
- **Computation**: Use to create a new formula following the same process as the **Computations** feature from *Self-Managed Displays*.
- **Gravity**: ??
- **Table**: Create a table based on the selections in the **Select Dyads** and **Select Series** boxes.
- **Line**: Create a line graph based on the selections in the **Select Dyads** and **Select Series** boxes.
