

Balance of Payments and International Investment Position statistics (BoP/IIP) from IMF

The printable version is no longer supported and may have rendering errors. Please update your browser bookmarks and please use the default browser print function instead.

“The **Balance of Payments** provides a framework that is applicable for a range of economies, from the smallest and least developed economies to the more advanced and complex economies. As a result, it is recognized that some items may not be relevant in all cases.

The balance of payments is a statistical statement that summarizes transactions between residents and nonresidents during a period. It consists of the goods and services account, the primary income account, the secondary income account, the capital account, and the financial account.

Under the double-entry accounting system that underlines the balance of payments, each transaction is recorded as consisting of two entries and the sum of the credit entries and the sum of the debit entries is the same.

The different accounts within the balance of payments are distinguished according to the nature of the economic resources provided and received.”^[1]

“The **International Investment Position (IIP)** is a statistical statement that shows at a point in time the value of:

Financial assets of residents of an economy that are claims on nonresidents or are gold bullion held as reserve assets; and the liabilities of residents of an economy to nonresidents. The difference between the assets and the liabilities is the net position in the IIP and represents either a net claim on or a net liability to the rest of the world. The IIP represents a subset of the assets and liabilities included in the national balance sheet. In addition to the IIP, the national balance sheet incorporates nonfinancial assets as well as financial assets and liabilities positions between residents.”

Availability and data source

The IMF data on balance of payments and international investment positions is available [here](#)-

<http://data.imf.org/?sk=7A51304B-6426-40C0-83DD-CA473CA1FD52&ss=1409773422141>

The data is prepared in accordance with the 6th edition of the Balance of Payments and International Investment Position Manual. The handbook can be accessed here, <http://data.imf.org/?sk=7A51304B-6426-40C0-83DD-CA473CA1FD52&ss=1390288795525>

BoP data is available for approximately 204 economies, while IIP data is available for approximately 143 economies. Data is available for most countries from the year 1945.^[2]

Definitions

BoP is a flow while **IIP** is a stock. Although the balance of payments accounts are, in principle, balanced, imbalances result in practice from imperfections in source data and compilation. This imbalance, a usual feature of balance of payments data, is labeled net errors and omissions and is identified separately in published data. It should not be included indistinguishably in other items. Net errors and omissions are derived residually as net lending/net borrowing and can be derived from the financial account minus the same item derived from the current and capital accounts.^[3]
