

File:ED Section 6, equation 1 6.4.1.png

The printable version is no longer supported and may have rendering errors. Please update your browser bookmarks and please use the default browser print function instead.

The IFs production function combines capital, labor, and total factor productivity to compute value added by sector. It does not distinguish in that function between labor by skill level within each sector. The labor variable used in the function is LABS, simply the sum of labor demand across skill levels.
