

File:ED Section 6, equation 4 6.3.3.1.png

The printable version is no longer supported and may have rendering errors. Please update your browser bookmarks and please use the default browser print function instead.

The difference term is used to adjust a multiplier (Mull) that uses and then updates a cumulative term for the multiplier across time (MullW), constraining the year-to-year change in the annual multiplier and therefore also the cumulative term. That is, the equations below use the logic of the PID approach without a call to the ADJSTR function more often used in its implementations (as in Section 4.4)
