

GDP

The printable version is no longer supported and may have rendering errors. Please update your browser bookmarks and please use the default browser print function instead.

GDP is a vital series within IFs, so it is vital that it is pulled properly. The process of pulling the data starts at the SSP database, where you will be pulling the data from.

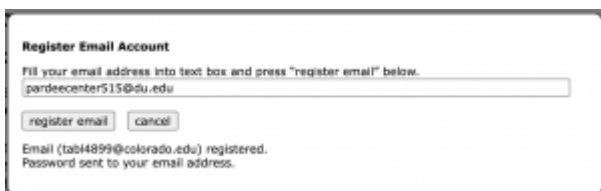

First, navigate to the IIASA Shared Socioeconomic Pathways database, also known as the SSP, which can be found [here](#).

Once you've reached the SSP database welcome page, you will be prompted to log in or register your email. If you have not registered your email already, click the "register email" button and follow the prompts.

The image shows a web form titled "Register Email Account". It contains a text input field with the placeholder text "Fill your email address into text box and press 'register email' below." Below the input field are two buttons: "register email" and "cancel".

Email Registration Window in SSP Database

The image shows the second step of the email registration process. The form is titled "Register Email Account" and contains a text input field with the email address "pardecenter515@du.edu". Below the input field are two buttons: "register email" and "cancel". Below the buttons, a message states: "Email (tab44899@colorado.edu) registered. Password sent to your email address."

Part 2 of Email Registration in SSP Database

The image shows the SSP Database Homepage. The header includes the IIASA logo and the text "SSP Public Database Version 2.0". The main content area is titled "SSP Database (Shared Socioeconomic Pathways) - Version 2.0" and features a "NEW RELEASE" section. Below this, there is a table with the following data:

Category	Changes since release 1.0	Release date	Additional new scenarios completed
SSP	Updated scenarios to reflect recent research (e.g. for emissions), and the projections for greenhouse gas emissions and other variables were harmonized for the base year to historical inventories. Most of these harmonized SSP scenarios were provided to the Executive of CMIP6 (the Climate Modeling Intercomparison Project 6) and will be part of the initial assessment of possible future climate changes.	2018	SSP1-2.6, SSP1-5.0, SSP2-4.5, SSP3-7.0, SSP4-6.0, SSP5-8.5

SSP Database Homepage

After registering your email and creating your log-in, log in to the database and navigate to the *downloads* tab at the top of the page.

In the downloads tab, there are a number of different datasets available for download but the one needed for GDP will be found under Basic Elements. The Basic Elements data contains both regional and country dataset and is available in both .csv and .mdb formats. Here, we will only be using the country dataset in the .csv format, titled *SspDb_country_data_2013-06-12.csv.zip*.

Download Tab in SSP

Next to the title of the file, there will be a blue download link. Click the link and begin the download. Once the file has been downloaded, you will need to extract the .csv from the .zip file and the pull will be complete!
